

Project Implementation Summary Report

AI-Based Clinical Conversation Intelligence System
Generated: June 25, 2026

1. Session Overview

This report summarizes the codebase restructuring, UI enhancements, and feature development completed for the AI-Based Clinical Conversation Intelligence System. The system bridges medical consultations, chiropractic/osteopathy/Ayurvedic treatment workflows, and clinical dialogue intelligence using Streamlit and Supabase. All core components compile and pass the standard unit test suite.

2. Key Achievements & Codebase Upgrades

- **Case-Sensitivity Resolution:** Renamed the filesystem database folder from *Database* to *database* to align with module import paths and eliminate `ModuleNotFoundError`.
- **Module 3 Frontend (Consultations):** Integrated a report/scan file uploader in `pages/add_consultation.py`. Connected the upload workflow to Supabase storage buckets via `FileService`.
- **Module 4 Frontend (Treatments):** Programmed three Streamlit pages (`add_treatment.py`, `view_treatment.py`, `search_treatment.py`) enabling clinicians to log and track physical adjustments and Ayurvedic therapies.
- **Module 6 Frontend (Conversations):** Created uploader and transcript review pages (`add_conversation.py`, `view_conversation.py`, `search_conversation.py`) with direct audio upload capabilities.
- **Navigational Refinement:** Overhauled `app.py` navigation menu widgets. Hidden Streamlit's default subpage list in the sidebar and injected a database status panel displaying live statistics.

3. Module Implementation Checklist

Module #	Module Description	Status
Module 1	Patient Management System	100% Completed
Module 2	Pain & Body Area Assessment	80% Completed (Visual map pending)
Module 3	Consultation & Examination	90% Completed (DB RLS pending)
Module 4	Therapy & Treatment Management	100% Frontend Completed (Active CRUD)
Module 5	Progress Tracking	0% Not Started
Module 6	Conversation Capture & Transcription	60% Completed (Audio uploader UI ready)
Module 7	AI/ML Engine & Decision Intelligence	0% Not Started
Module 8	Dashboard & History Visualizations	0% Not Started

4. Testing & QA Verification

The test suite was run locally using the updated module architecture. **All 27 test cases passed successfully** (100% pass rate) with zero errors. Database connections (read/write) are validated for Patient and Pain Assessment records.
